

BEASTMODE AI TOOL

LIVE COPY-TRADING INTELLIGENCE

User Guide

Everything you need to install the app, read a trader's live positions, and turn them into a plan sized for your own account.

What this tool does

On Hyperliquid, every trader's position is public on-chain. Not their name - their actual open trades, sizes and entry prices. BEASTMODE AI TOOL reads that public data and puts it in front of you:

- **Who is winning right now** - the public leaderboard, ranked over 24 hours, 7 days, 30 days or all time.
- **What they are holding this second** - every open position with size, entry price, leverage, profit and liquidation price.
- **What they just bought and sold** - their most recent executed trades, to the second.
- **What that would mean for your account** - their positions scaled down to your capital, with concrete quantities, stop-loss and take-profit levels.

What it does not do

- It **places no orders** and is connected to no broker or exchange. It reads public data and does the arithmetic. Every trade is placed by you, by hand.
- It holds no keys, no passwords and no funds. It never asks you to connect a wallet.
- It does not predict prices. It shows you what large traders are actually doing and sizes it for your account.

Why Hyperliquid and not Binance

Hyperliquid is the one large exchange where every position is publicly visible on-chain. On Binance, Coinbase or Bybit you cannot see anyone else's book at all - which is why copy-trading tools there depend on people voluntarily publishing their trades.

Installing on your Mac

- 1 Download the file BEASTMODE AI TOOL .dmg.
- 2 Double-click the downloaded file. A window opens showing the app icon next to an Applications folder.
- 3 Drag the app icon onto the Applications folder.
- 4 Open your Applications folder and double-click **BEASTMODE AI TOOL**.

The window opens and the trader list starts loading. The first load takes a few seconds because the full ranking is downloaded once; after that it is instant.

First launch: macOS will probably block the app

This is normal for any app that is not distributed through the Mac App Store. macOS blocks it until you allow it once. Do this:

1. Double-click the app. A warning appears - click **Done** or **Cancel**.
2. Open **System Settings** from the Apple menu.
3. Go to **Privacy & Security** and scroll down.
4. Next to the message about BEASTMODE AI TOOL, click **Open Anyway**.
5. Confirm with your password or Touch ID.

You only do this once. Every later launch is a plain double-click.

If the app opens but the list stays empty

Look at the bottom left of the window. A red line there tells you what went wrong:

Message contains	What to do
certificate	Your Mac cannot verify secure connections. Open the app folder and double-click <code>fix_certificates.command</code> , then start the app again.
No connection	You are offline, or a VPN or company firewall is blocking the connection. Try another network.
HTTP 429 / 503	Hyperliquid is rate-limiting or briefly down. Wait a minute and press REFRESH RANKS.

Screen 1 - Ranks

This is the home screen: the public leaderboard, best first.

The ranking, sorted by 30-day profit.

Choosing the timeframe

The four buttons - **24H**, **7D**, **30D**, **ALL TIME** - re-rank the whole list by profit over that period. Each one shows its own real leaders, so a trader who is hot today can top 24H while sitting far down the monthly list.

Reading a card

Element	Meaning
Number in the ring	Rank in the selected timeframe. Gold, silver and bronze mark the top three.
Name or address	The trader's display name if they set one, otherwise their wallet address.
Large green figure	Profit in US dollars over the selected period. Red means a loss.
ROI	That profit as a percentage. A large ROI on a small account is easier than a small ROI on a huge one.
EQUITY	How much the account is worth in total.
Green bar	This trader's profit compared with the leader's.

Type any wallet address into the search box to find one specific trader. **REFRESH RANKS** re-downloads the ranking; **OPEN SITE** opens the same leaderboard on Hyperliquid's own website so you can verify anything you see here.

Screen 2 - The trader

Click any card to see what that trader is doing right now.

COPY NOW

Live positions on top, recent executed trades below.

Two things to check before copying anyone

Do they hold anything at all? A trader with a huge monthly profit but no open position has nothing for you to mirror.

Are their positions deep in the red? Then you would be buying into a losing trade that is already running against them.

Open positions

Column	Meaning
SIDE	LONG means they profit if the price rises, SHORT if it falls.
SIZE	How many coins. Negative numbers are short positions.
ENTRY	The average price they paid. Compare it with today's price - if the market has already run far past it, you would be entering on much worse terms than they did.
LEV	Leverage. 5x means a 20 % move against them wipes the position.
UNREAL. PNL	Profit or loss they are sitting on right now.
LIQ	The price at which the exchange force-closes them.

Recent fills

The lower table is the answer to "what did they just buy?" - every recent execution with time, asset, direction, size and price. **REFRESH** pulls both tables again.

What goes wrong in practice

- **They exit and you do not notice.** The tool shows their live position, but it cannot ring your phone. Check daily.
- **You enter later, at a worse price.** Their entry is on screen for exactly this reason - compare before you commit.
- **Their pain tolerance is not yours.** They trade many times your capital. A 30 % drawdown may be an ordinary week for them and the end of your account.
- **Past profit is not a promise.** A trader at the top of a 24-hour ranking may simply have taken one enormous risk that happened to work.

Screen 3 - The copy plan

Press **COPY NOW**. Enter your capital, pick a risk tier, and the tool scales the trader's real positions down onto your account.

COPY PLAN - BEASTMODE AI TOOL

Trader : 0xa6a3a4506513270e269e0d37f2a74de452e6b438 (ghostwire)
Their equity : \$1,250,000.50
Your capital : \$5,000.00
Risk tier : BALANCED (total exposure 100 % of capital)

ORDERS

1) ETH BUY / LONG
Size : 0.8065 ETH at \$3,100.00
Notional : \$2,500.00 (50.0 % of the plan)
Leverage : 3.0x -> \$833.33 margin
Stop loss : \$2,852.00 (loses about \$200.00)
Take profit: \$3,596.00
Entry : split into 2 equal tranches, not all at once
Their side : entry \$2,800.00, position \$1,800,000.00, currently +75.0 %

COPY TO CLIPBOARD SAVE AS FILE CLOSE

COPY NOW

The plan recalculates as you type.

The three risk tiers

Tier	Total exposure	Stop distance	Max leverage
SAFE	50 % of your capital	5 %	2x
BALANCED	100 %	8 %	3x
DEGEN	150 %	12 %	5x

A wider stop is not safer. It means each position is allowed to move further against you before you cut it, so a single trade can lose more.

Reading one order

1) ETH BUY / LONG
Size : 0.8065 ETH at \$3,100.00
Notional : \$2,500.00 (50.0 % of the plan)
Leverage : 3.0x -> \$833.33 margin
Stop loss : \$2,852.00 (loses about \$200.00)
Take profit: \$3,596.00

Line	What to do with it
Size	The quantity to buy, at roughly that price.
Notional	The position's dollar value, and its share of the plan.

Line	What to do with it
Leverage / margin	Set this leverage; the margin is what is actually taken from your balance.
Stop loss	Place this together with the order, never later. The figure in brackets is what you lose if it triggers.
Take profit	Where the plan closes in profit - twice the stop distance.

The four tiles above the text summarise the whole plan. **WORST CASE** is the one that matters: what you lose if every stop triggers at once. If that number is uncomfortable, drop to a lower tier - that is exactly what it is there for.

"POSITION LIMIT APPLIED"

No single position in your plan may exceed 40 % of it. When a trader is more concentrated than that, the surplus is spread across their other positions and the plan says so. Your mix is then deliberately less concentrated than theirs.

Use **COPY TO CLIPBOARD** or **SAVE AS FILE** to keep the plan while you place the orders.

A full run, start to finish

- 1 Open the app and let the ranking load.
- 2 Pick a timeframe. **30D** favours consistency; **24H** favours whoever is hot today.
- 3 Click a trader near the top.
- 4 Check they actually hold open positions, and that those positions are not deep in the red.
- 5 Compare their entry prices with today's prices. Far past their entry means a worse deal for you.
- 6 Press **COPY NOW**.
- 7 Enter your real capital - not what you wish you had.
- 8 Start at **SAFE**. Read the **WORST CASE** figure and decide whether you could live with that loss.
- 9 Copy the plan, then place each order on your exchange **with its stop loss attached**.
- 10 Come back daily, open the same trader and press **REFRESH**. If they have closed a position, decide whether you close yours too.

Risk and disclaimer

Read this before you use the tool with real money

BEASTMODE AI TOOL is an information tool. It displays publicly available exchange data and performs arithmetic on it. It is **not investment advice**, not a recommendation to buy or sell any asset, and not a managed or automated trading service.

The software places no orders and connects to no broker. Every trade you make is your own decision and your own responsibility.

Trading leveraged crypto derivatives can lose you your entire deposit, and can do so quickly. Copying another trader does not reduce that risk - it adds the risk that they change their mind without telling you.

The data comes from Hyperliquid's public endpoints. It can be delayed, incomplete or unavailable, and the authors of this software do not control it and do not warrant its accuracy.

Never trade with money you cannot afford to lose.

About the data

The app reads the same public endpoints that Hyperliquid's own website uses. No account, no API key and no registration is required, and nothing about you is transmitted anywhere. The downloaded ranking is cached on your own Mac in a hidden folder called `.beastmode` in your home directory.

Privacy

The app has no analytics, no telemetry and no account system. It talks to exactly one host, `hyperliquid.xyz`, and to nothing else.
